Team Inventory

September 18, 2026

Team Name

TLATeX

Project

ReconTEXTualization

Team Sponsor

Chris Ortiz

Team Mentor

Smirthya Iyer

Team Members

Tyler Carver
Aron Gebrezghr
Evelyn Torres
Daniel Schalesky

The purpose of this team inventory document is to introduce the members of our team. The following pages outline the education, skills, and relevant experience of each team member.

Tyler Carver
tdc266@nau.edu
tdcinaz@gmail.com
602-620-4822

I am from Cave Creek, Arizona, and I am pursuing a degree in computer science with a minor in physics. I am currently developing medical research software as part of an interdisciplinary team, which has given me the opportunity to gain substantial development experience. My grades and my GitHub commit history prove how passionate and active I am as a developer. My greatest strength is the diversity of my skillset, especially my background in math and physics.

Education

Northern Arizona University – Programming Languages, Automata Theory, Discrete Math
Coconino Community College – Calculus I, II, & III, Differential Equations, Physics I & II
Cactus Shadows High School

Work Experience

NAU Bioengineering Devices Lab – Software Developer & Researcher (2024 – Present)

For the last two years I have been developing medical research software to study risk factors in vascular morphology that lead to brain aneurysms and strokes. This software, “Aneumetrics”, is an end-to-end automated pipeline that processes brain scans to generate volumetric mesh models of a patient’s cerebral arteries and simulate blood flow with computational fluid dynamics.

Soulpedal Inc – CAD & CAM Designer (2022 – 2024)

At Soulpedal I used Autodesk Fusion 360 to prototype over 150 iterations of a wearable tech product for musicians. Additionally, I programmed an advanced 5-axis hybrid 3D printer and CNC milling machine to manufacture the product.

Technical Skills

Full stack development – Through my research I have gained substantial experience with CUDA, PyTorch, VTK, QT, Pandas, Python3, Rust, WebGPU, Wasm, and much more.
Networking and protocols – I am currently using kernel-level packet capture to forward a 16-bit GigE Vision camera stream through a WireGuard tunnel at 30fps with no frame drops.
Embedded electronics, sensors and signals, DAQ – My software runs an in-vitro simulated surgical suite with pressure transducers, thermocouples, and PIV.
Agentic coding and multi-agent orchestration – My primary workstation is an Nvidia DGX Spark which runs multiple LLMs locally that I orchestrate for complex programming tasks.

Aron Gebrezghr
akg357@nau.edu
arongeb117@gmail.com
910-745-5966

I am Aron Gebrezghr, a senior studying computer science at Northern Arizona University. My hometown is Flagstaff, Arizona.

Education

Northern Arizona University - Software Engineering
Coconino High School

Notable School Projects:

Health and Wellness Website
Article Summarizer

Work Experience

NAU Information Communication Technology - Student Employee (2025 - 2026)
I helped install and maintain structured cabling and network pathways, supporting campus wide IT infrastructure. This experience has allowed me to gain professional technical experience. I have also gained experience with teamwork.

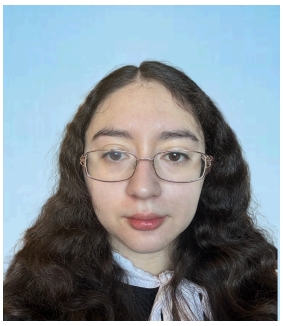

Technical Skills

IT Infrastructure
Software Development
These skills were gained through the NAU Information Communication Technology and my course work.

Interests

Fishing - I fish throughout Arizona, from Frances Short Pond, Whitehorse Lake and Ashurst Lake. I have caught all sorts of fish like Trout, Bass, and Pike just to name a few.
Basketball - I enjoy watching the NBA.
History - I enjoy learning history from reading and watching documentaries.

Evelyn Torres
eit27@nau.edu
evetor419@gmail.com
520-273-3329

I am Evelyn Torres. I am a computer science major senior. My hometown is Buckeye, Arizona. I have lived in Flagstaff, Arizona for the last 4 years as I attended NAU.

Education

Northern Arizona University - Operating Systems
Youngker High School

Technical Skills

Programming - I have worked on programming for my courses. A major project I worked on is a simulation of an operating system for class to learn concepts such as semaphores.
Operating Systems and Networks - Through NAU coursework, I have learned how to manage threads and processes with different protocols and approaches.
Data Structures and Algorithms- Through NAU coursework, I have used multiple data structures and algorithms to study multiple approaches to problems such as rover automation algorithms.

Interests

Spaceflight Software and Hardware - I enjoy learning about spacecraft and software. My favorite spacecraft to learn about are the NASA space shuttles.. I am interested in learning about how computers and programming languages work in order to do dangerous missions.
Knitting and Crochet - I enjoy knitting and fiber arts. It is my creative outlet. I have created a handbag and legwarmers.
Reading - I read and my favorite genre is memoirs and fiction. I learn from other people's experiences. I like fiction to inspire my own creative writing.

Daniel Schalesky
drs546@nau.edu
danielschalesky@gmail.com
(928) 951-0953

I am Daniel Schalesky, I am a early graduating Computer Science Major at NAU. My hometown is in Payson, Arizona.

Education

Northern Arizona University - Operating Systems, Linear Algebra.
Payson High School - Calculus 1 and II

Technical Skills/Work Experience

Worked for Gila County Floodplain as an intern organizing files
Volunteered and worked for churches running Audio Visual for ~ 5 years
Simple Network experience - Currently learning more about networks
Web development experience - some experience developing websites for class
Programming - C, Python, Javascript

Interests

Networks - I enjoy trying to understand the connections between computers and how devices connect to each other.
Problem solving - I enjoy helping other people solve problems with the skills that I have.
Video Games - I am an avid gamer and I enjoy working as a team to win games.
